AIRMAN TYPE RATING PROFICIENCY CHECK (ROTORCRAFT)

Check Type		Date	

AIRMAN INFORMATION

Name of Airman (Last, First, Middle Initial)	License Number		Expiry Date	
	Medical Class		Date	
	Passport Number		Nationality	
Employed By	DOB		Limitations	

GRADING

S = Satisfactory	U = Unsatisfactory	*/W = Maybe Waived	NA = Not Applicable

Equipment examination and visual inspection (ORAL TEST)			Shallow approach and running/roll-on	
I- PREFLIGHT			Sloping ground, crosswind landing	
Equipment examination	*		Precision instrument approach AEO with / without automation	
Performance and limitations			Precision instrument approach OEI with / without automation	
Weather information	*		Non-precision instrument approaches	
Preflight inspection	*		Missed approach AEO with / without automation	
Engine starting & rotor engagement malfunctions			Missed approach OEI with / without automation	
Taxi & before takeoff check	*		Autorotative landing	
Before takeoff check	*		**VI. PERFORMANCE MANEUVERS**	
II- HOVERING MANEUVERS			Rapid deceleration	
Slope operations	*		Straight in autorotation	
Surface taxi (only wheeled helicopter)			180° autorotation	
Hover taxi	*		**VII- NORMAL AND ABNORMAL PROCEDURES**	
Air taxi	*		Loss of tail rotor effectiveness (LTE)	
III- TAKEOFFS, AND DEPARTURE PHASE			Fuel, hydraulic, electric systems	
Instrument departure (SID)	*		Electronic flight instrument system	
LVTO visibility 800m only OpSpec R116			Power plant system	
Clear area, confined area, helipad, helideck, short field			Flight control system	
Crosswind takeoff			**VIII- EMERGENCY OPERATIONS**	
Different kind of profile (CP 1,2,3)			Low rotor RPM recovery	
Engine failure shortly before TDP or DPATO			Dynamic rollover recovery/ avoidance	
Engine failure shortly after TDP or DPATO			Inflight smoke/fire	
IV- INFLIGHT MANEUVERS			Ditching	
Steep turns	*		List of emergency equipment and survival gear *	
Holding			After-landing procedures	
Engine failure (hover/ altitude)			**NIGHT VISION IMAGING SYSETMS**	
Autorotative descent			NVG Pre –Flight & Post -Flight	
Upset recovery maneuvers			NVG Adjustment & Focus	
Settling with power			NVG Before Take Off Check	
V- LANDINGS AND APPROACHES TO LANDING			Use of Acft Light for obstacle detection	
Clear area, confined area, helipad, helideck, short field			NVG Failure / Malfunction	
Different kind of profile (CP 1,2,3)			**X- GEX- GENERALNERAL**	
Engine failure before LDP or DPBL (go around or landing)			Cockpit management	
Engine failure after LDP or DPBL (landing)			Crew coordination and monitoring CRM	
Autorotation with power recovery			SOP and Checklist usage	
Instrument arrival (star)	*		FMS usage	
Normal and crosswind approaches and landings			Aeronautical decision making and risk MGMT	

REMARKS	EXAMINER INFORMATION		
	PRINT Name		
	Date		Signature
ATO NAME AND LOCATION	ACFT type (M/M)		
	Total Simulator Time		
	Pilot's result of check	☐ Approved	☐ Disapproved

GACA INSPECTOR USE ONLY

Result Of Pilot Check	Approved	☐	TCE/ examiner's performance	Satisfactory	☐
	Disapproved	☐		Unsatisfactory	☐

Inspector Name	Signature	Date
